Abstract

Hooker Tactical Safety and Defense Equipment Inc. is a U.S.-based technology company focused on the development and delivery of advanced communications solutions utilizing light path technology. The company supports global Defense and Security Electro-Optics (EO) applications, particularly within C4ISR (Command, Control, Computers, Communications, Intelligence, Surveillance, and Reconnaissance) environments where reliable, high-performance communications are mission critical.

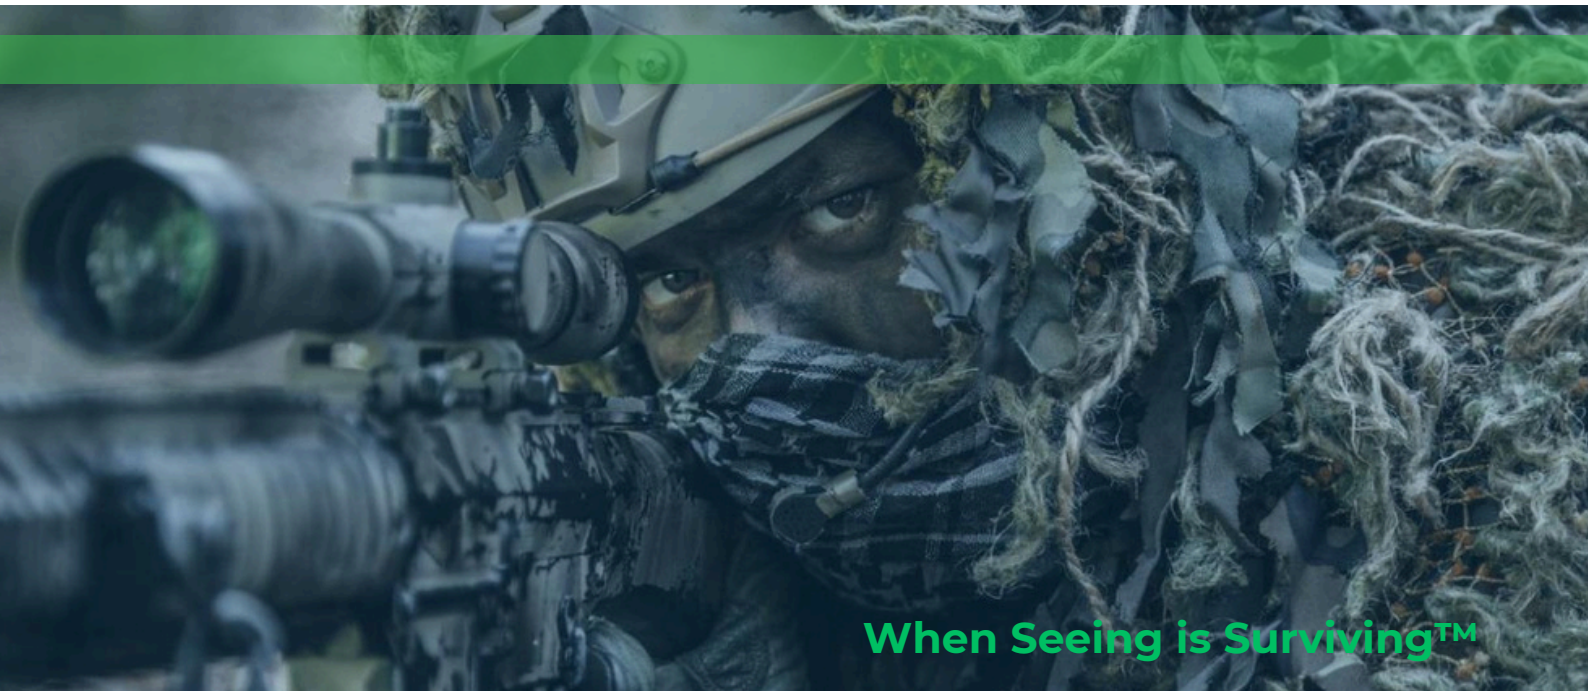

Built on more than 25 years of innovation and product development, Hooker Tactical specializes in next-generation communication platforms that leverage light-based technologies to enable secure, efficient, and high-bandwidth connectivity for defense and law enforcement operations.

With an agile team of experienced engineers and industry professionals, Hooker Tactical is committed to advancing innovative solutions that enhance operational awareness and communication capabilities for defense and security organizations worldwide.

Susan Hooker

Hooker Tactical Safety & Defense Equipment, Inc

The Magical Third Eye

Hooker Tactical Third Eye products are primarily manufactured for military and law enforcement defense, safety, training, and situational awareness and analysis applications. This product line revolutionizes tactical operations by seamlessly capturing and sharing real-time video from any scope optic.

This innovative technology utilizes a unique Beamsplitter to divide the light path, allowing the user to view the scene through the optic while simultaneously transmitting a live video feed to a predetermined destination. Utilizing our patented technology, half of the beam of light is diverted to a compact, high-end integrated board camera, capturing high-quality video without compromising the user's field of view. The captured video can be encoded and transmitted using different communication technologies, ensuring seamless integration with existing communication systems.

The delivery of a video image simultaneously when seen, in real time, is the special privilege of Hooker Tactical Third Eye product. Real time video transmission is a field tested concept and has been used with the Third Eye Eye Cam product line for more than 25 years. The beauty of the Third Eye optics when mounted to the eye piece end of a riflescope, the video capture takes place without changing the point of aim and point of impact for a weapon, the shooter or viewer still enjoy seamless vision through their scope.

Why Clients Prefer Our Third Eyes?

Simplicity

Seamless view with no delays.

Rugged Design

Indestructible Aircraft Grade Aluminum

Light Weight

4 Oz Eye Cams & 16 Oz Riflescope 3rd Eyes

Ease Of Use

Attached in less than 3 seconds

Ease Field Repair

Interchangeable Modular Parts

Radio Agnostic

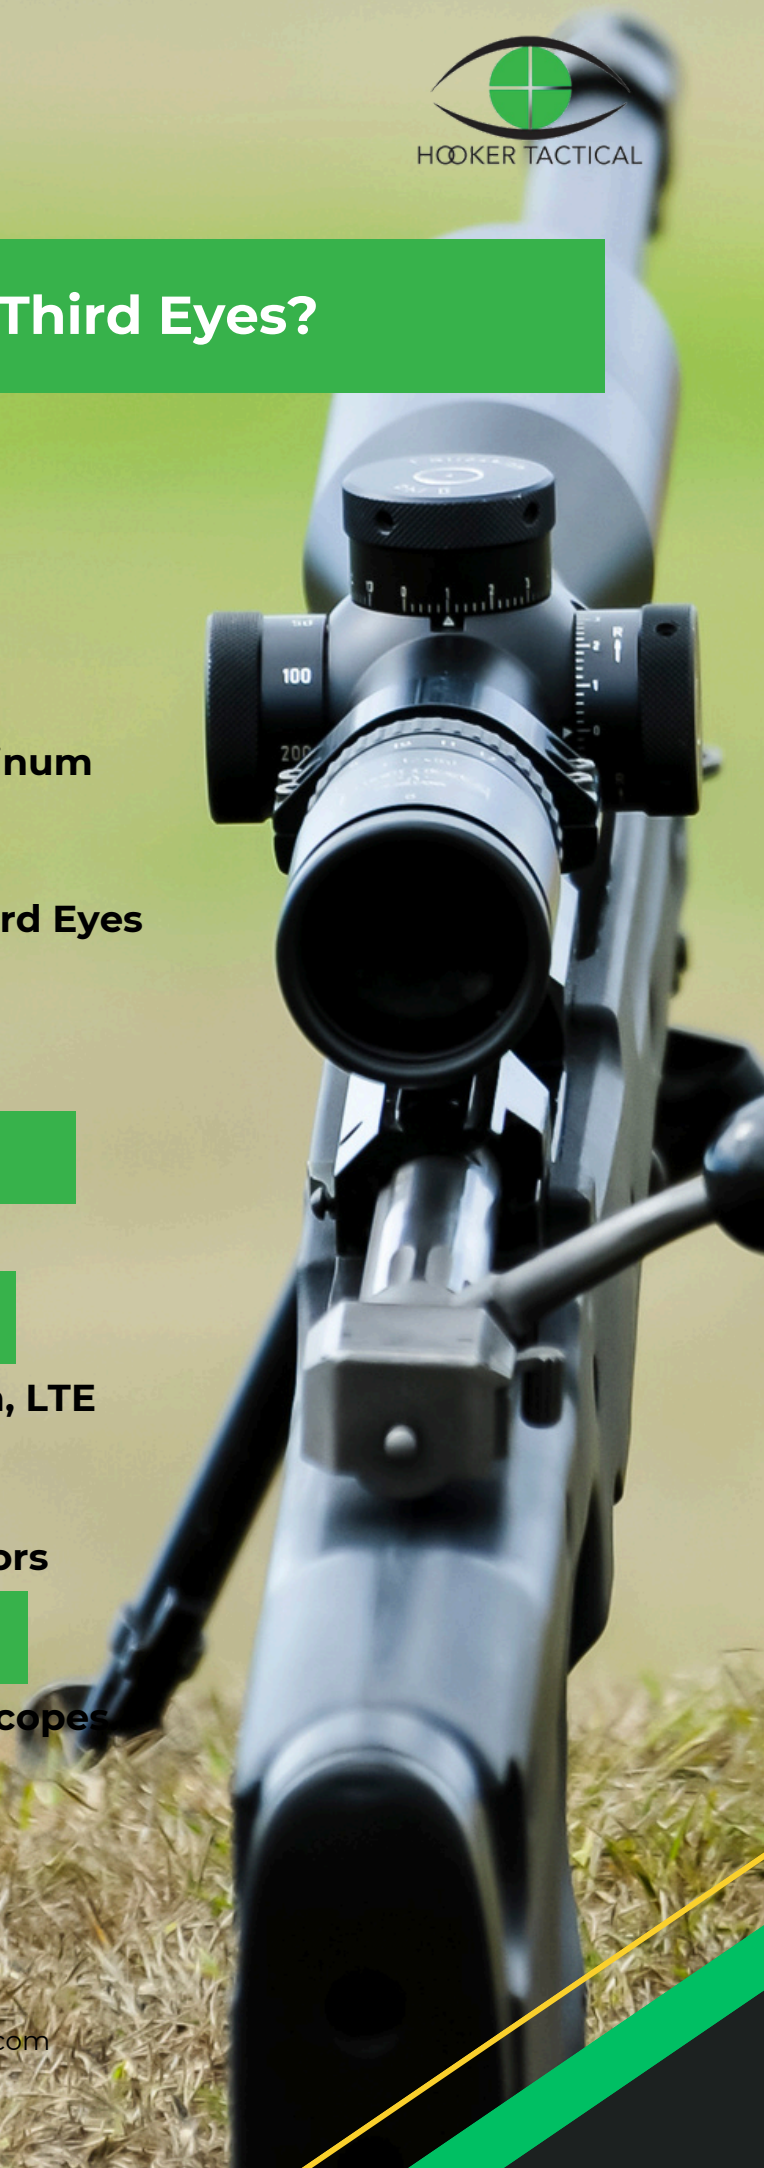

Works with different SDRs, Satcom, LTE

Quality

15 years of field service with no errors

Interoperability

Works easily with your in-service scopes

Military, Law Enforcement & Civilian Designs Available

Key Features

- Coax Comp Video Interface
- 25mm focal length micro lens
- Weight: 4 Ounces
- 800TVL Video
- Day & Night Auto Switch
- WDR supporting 30FPS
- Motion Detection
- Low Power Consumption
(12 VDC, <2.4W)
- Non-ITAR (EAR99)

Our Best Seller So Far

Third-Eye GEN-I

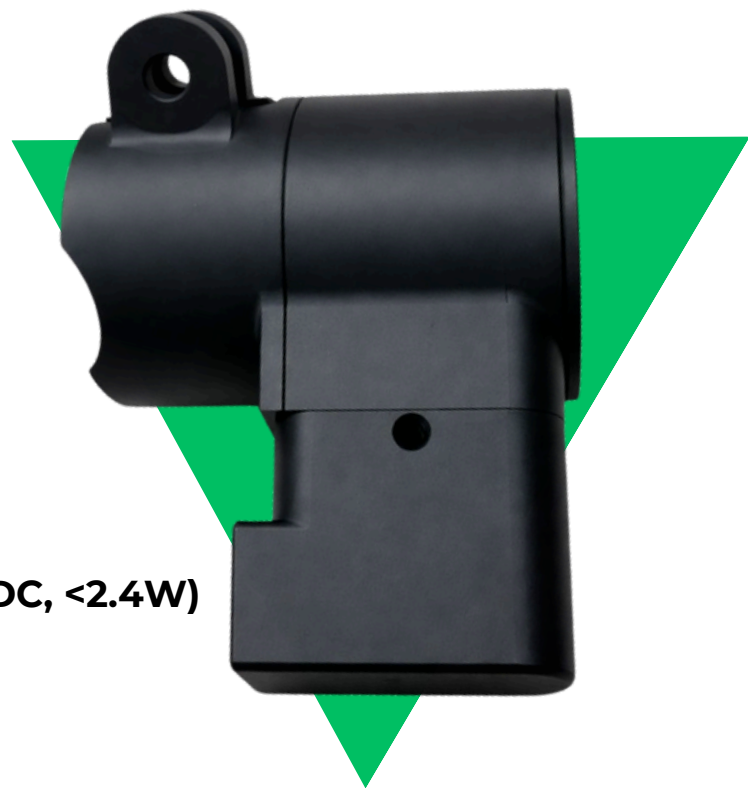

Military, Law Enforcement & Civilian Designs Available

Key Features

- HD-SDI Video Interface
- 25mm focal length micro lens
- 45% Smaller than GENI
- 50% Lighter than GENI
- 1080p FHD Video
- Day & Night Auto Switch
- WDR supporting 30FPS
- Motion Detection
- Lower Power Consumption (12 VDC, <2.4W)
- Hi Resolution
- Non-ITAR (EAR99)

Meet the latest release 2026

Third-Eye GENII

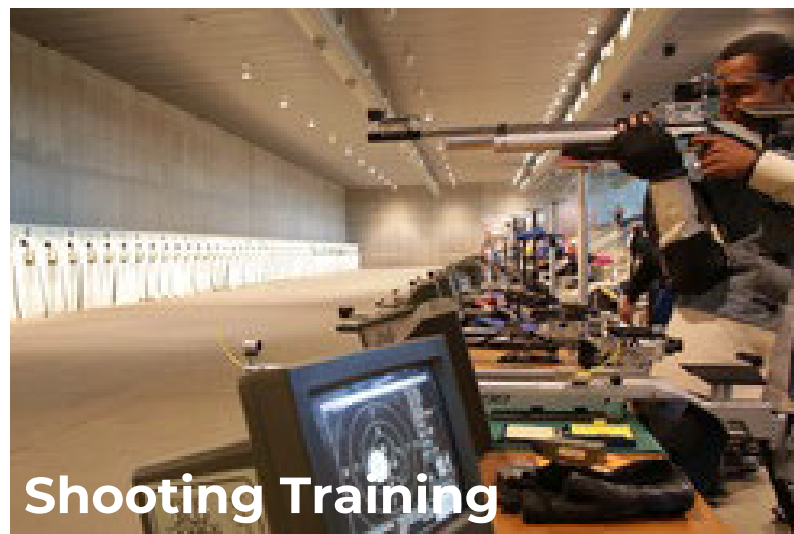

Available For Orders Now!

Third-Eye GENII is available in different formats with additional specialty engineering for Riflescopes, Spotter Scopes, and NVGs*

***Any Third-Eye items associated with NVG systems are subject to ITAR license.**
